

# BEESWAX Pure BALLS™

Guide to product use.

Can assist with management of:

Abscess exit holes, Hoof Cracks, Thrush protection, Water repellent sealant.

Prevent debris and excess moisture accumulation.

Natural Hoof Putty shaped into balls to reduce transfer of bacteria.

Contains: Beeswax, Natural Oils, Essential Oils.

All ingredients selected to target reducing fungal and bacterial infections in the horses' hoof whilst repelling excess moisture and debris. Essential Oils with Antimicrobial and Antiseptic properties. Store under 25 degrees C out of direct sunlight.

- Clean hoof and remove any debris lodged in target areas.
- You can flush the cracks with your chosen liquid or use our Hoof Spray prior to application for a thorough cleanse. If cracks and crevices are hard to access, consider using our Monoject 412 Syringes with liquid.
- Ensure application area is clean and DRY prior to applying the balls. Beeswax and the Natural Oils repel moisture so will not thoroughly adhere to areas of the hoof still dry.
- Our ball size is approx. 10-13mm diameter. If this amount is too much for smaller areas, you may break the ball apart and use a smaller portion.
- If using in Winter or colder areas, the balls will be firmer and may need some warming in your hands prior to application.
- Select the desired amount, apply to area and thoroughly work into the targeted area.
- Try to work into the top of the infected area so to reduce ground force leverage which may result in the application releasing prematurely.
- Longevity of the application will depend on application process, horses living environment etc. We recommend checking at least once per day.
- Reapplication will be necessary when there is no longer any of the Beeswax PURE Ball present in the top of the targeted application area.
- Clean out area and repeat process ensuring no debris or moisture is present upon reapplication.
